

INTRODUCING OUR NEW PRODUCT LINE - VITRUS

Throughout our 30-year journey of providing fully customizable wine storage solutions, we have come to understand that different customer segments have varying needs. While our products are known for their high level of customization, we have also recognized that some customers prefer more standard solutions that still offer options for personalization, but at a more affordable price point.

As a result, we have adapted our offerings to cater to these diverse demands from the market - an advanced glass wine cellar enclosure. VITRUS is a versatile "modular system" that includes insulated floor, wall and ceiling panels, framed insulated glass doors, framed fixed glass panels which come together to form the enclosure and a wine racking system to be chosen from a variety of options.

It can be built-in or free-standing with single, double or triple doors and dimensions are customizable according to the need. Vitrus is an excellent option for Spec. Builders and Architects saving time and resources.

VITRUS incorporates multiple insulation features that ensure excellent thermal insulation and ultimate air tightness, providing proper storage conditions for wine. VITRUS is available in two options: "Bare-Shell" or "Furnished." It is available in basic black or wood veneer of just about any wood species or color you desire.

We believe that as one of the leading wine cellar companies, our clients can be best catered to by our advanced wine cellar enclosure, VITRUS, fulfilling all of your expectations.
